	Er	ntry Point Sa			Distribution System Samples (2)						
Month	Number Required	Number Taken	Highest Residual Measured (mg/L)	Date Sample Exceeded MCL	Number Taken	Date of 3 Sample Set ⁽³⁾		Arithmetic Average of Distribution System Samples			
(1) Entry Point samples can be analyzed by amperometric titration. (2) Distribution samples must be analyzed by ion chromatography. Detailed sample information is to be reported on the reverse side of this form. (3) Systems must take a three-sample set of chlorite samples each month in the Distribution System. Sampling in response to an Entry Point MCL exceedance may be used to satisfy this requirement. 2. BROMATE MONITORING

INSTRUCTIONS

^{*} Sample Types: "M" = maximum residence time, "1" = closes t customer to treatment facility, "A" = average residence time

This form is used to report monitoring results for chlorite and bromate per Regulation 1200-5-1-.36(8)(b). List the sample locations, types, dates and results for distribution system samples only.
